## B.E. (Civil Engineering) Eighth Semester (C.B.S.)

Elective - II : Water Transmission \& Distribution Systems
P. Pages : 4

NIR/KW/18/3618
Time : Three Hours

Max. Marks : 80

Notes : 1. All questions carry marks as indicated.
2. Solve Question 1 OR Questions No. 2.
3. Solve Question 3 OR Questions No. 4.
4. Solve Question 5 OR Questions No. 6.
5. Solve Question 7 OR Questions No. 8.
6. Solve Question 9 OR Questions No. 10.
7. Solve Question 11 OR Questions No. 12.
8. Assume suitable data whenever necessary.
9. Use of non programmable calculator is permitted.

1. Determine the discharges through various pipes and their directions acted to the reservoir as shown in the figure. The pipes details are :

| Pipe | Length m | Diameter mm | f |
| :---: | :---: | :---: | :---: |
| AJ | 400 | 200 | 0.025 |
| BJ | 300 | 150 | 0.025 |
| CJ | 320 | 150 | 0.025 |
| DJ | 280 | 100 | 0.025 |
| EJ | 150 | 120 | 0.025 |

2. A pump P lifts water from a sump having water level of 80 m and others two water tanks with RL of $93 \mathrm{~m} \& 82 \mathrm{~m}$ resp. All the pipes are connected at point J. The details regarding theirs parameters as shown in figures. The pump equation is $\left[\mathrm{Hp}=17.2-49.2 \mathrm{Q}^{1.852}\right]$. Determine the discharge at each pipes also find the Head at junction (J).

3. For the given network carryout one complete iteration and calculate the corrected Head using Newton Raphson's $\Delta \mathrm{H}$ Method.

4. From the given network carryout one complete iteration using linear theory $\Delta$ QEquation.

5. A serial distribution network consist of source node A \& four demand nodes B, C, D, E. The available HGL values at A is 100 m , The Level at node B, C, D, \& E are $90 \mathrm{~m}, 88 \mathrm{~m}$, $85 \mathrm{~m} \& 82 \mathrm{~m}$ resp. The resistance constant for pipe $\mathrm{AB}, \mathrm{BC}, \mathrm{CD} \& \mathrm{DE}$ are $0.05,0.12,0.2$, 0.3 respectively in Hazen Williams pipe head loss relationship. Carry out the node flow Analysis of the network, shown in Figure.

OR
6. Write notes on following :
a) Differentiate between NFA and NHA.
b) Differentiate between Hardy Cross Method of Balancing head \& Balancing Flow.
c) Node Flow compatibility.
7. Following data corresponds to a Distribution Reservoir :

| Time (hrs) | Demand $\left(\mathrm{m}^{3} / \mathrm{sec}\right)$ |
| :---: | :---: |
| $0-2$ | 6.2 |
| $2-4$ | 7.8 |
| $4-6$ | 15.8 |
| $6-8$ | 17.2 |
| $8-10$ | 19.8 |
| $10-12$ | 20.2 |
| $12-14$ | 26.6 |
| $14-16$ | 16.2 |
| $16-18$ | 18.4 |
| $18-20$ | 24.1 |
| $20-22$ | 16.3 |
| $22-24$ | 10.2 |

Pumping is to be done at a uniform rate from 6 hr to 12 hrs and 15 hrs to 21 hrs . Determine the : (i) Uniform rate of pumping (ii) Minimum Capacity of reservoir.

## OR

8. The pumping is to be serve a population of 90,000 @ 200 lpcd . If the pumping period is $8 \mathrm{hrs} /$ day and length of Rising main is 2 KM . The static lift is 20 m . The efficiency of pump is $90 \%$, efficiency of motor is $80 \%$, Power factor is $90 \%$, Design period is 3.0 years, Rate of interest is $8 \%$. Cost of electricity is Rs. 1.25 per kWh . The data regarding the pipe diameter their cost and CHW is given in the table, Select Optimal Diameter of Pumping Main.

| Pipe Diameter in mm | Unit cost (Rs.) | CHW |
| :---: | :---: | :---: |
| 300 | 380 | 105 |
| 400 | 750 | 108 |
| 500 | 880 | 110 |
| 600 | 1200 | 113 |
| 700 | 1580 | 115 |

9. In the Network shown in figure "O" is the source node with available HGL value 126.0 m and node 1 to 5 are demand nodes with following details.

| Demand Node | Minimum HGL | Demand $\mathrm{m}^{3} / \mathrm{min}$ |
| :---: | :---: | :---: |
| 1 | 118 | 5.1 |
| 2 | 113 | 3.8 |
| 3 | 115 | 3.9 |
| 4 | 114 | 2.5 |
| 5 | 113 | 2.5 |

Carry out one complete iteration by using cost head loss ratio criterion for the network shown in figure. Head loss is given by Hazen Williams formula. Use CHW $=110$ for all pipes. The cost function is given by $\mathrm{C}=0.132 \mathrm{D}^{1.4} \mathrm{~L}$ in which C is cost of the pipes in INR, D is diameter of pipe in mm and L is length of pipe in meter.

## OR

10. Design the Network described in Question No. 9 using relevant data and same cost function.
i) Frame LP model.
ii) Obtain basic feasible solution.
11. Find the total Number of possible trees of the Network as shown in figure. Sketch all the trees in which links $1,4 \& 6$ are absent.

## OR

12. a) Differentiating Path concept \& minimum spanning of tree method. Explain with the help of neat sketch.
b) Explain cost head loss ratio criterion method of network optimization.
